

# ARVAS

The Future of Smart Surveillance

Distribution by

TECHNOLOGY MADE IN GERMANY

The Future of Smart Surveillance

**ARVAS** is an AI-assisted video anomaly detection system that requires no input of rules or pre-configuration. It continuously analyses video streams and highlights any abnormal behaviour to operators in real time.

# Transform Surveillance from Reactive to Proactive

“Did you know that 98%\* of security video footage is NOT being watched?”

● Percentage of videos that require manual monitoring

## Live Streaming

100%

- Too many monitors
- Limited attention span
- Concept of operations: Reactive & Forensics

## Stream on Motion

50%

- Filters out approximately 50% of video footage with no motion

## ARVAS

1%

- Filters out 99% of normal motion
- Tap on the shoulder
- Proactive, Real-time Surveillance
- Increased Situational Awareness

# What is ARVAS?

## ANOMALY RECOGNITION VIDEO ANALYTIC SYSTEM

### Self-learning with wider coverage

- **Unsupervised Machine Learning**  
ARVAS uses the latest machine learning techniques.
- **Autonomous Real-Time Detection**  
No set up of any rules needed, other than installation.
- **Unlimited Variation of Behaviours**  
Behaviours are no longer limited by fixed rules. ARVAS learns automatically to distinguish between normal and abnormal behaviours.

### Easy Deployment

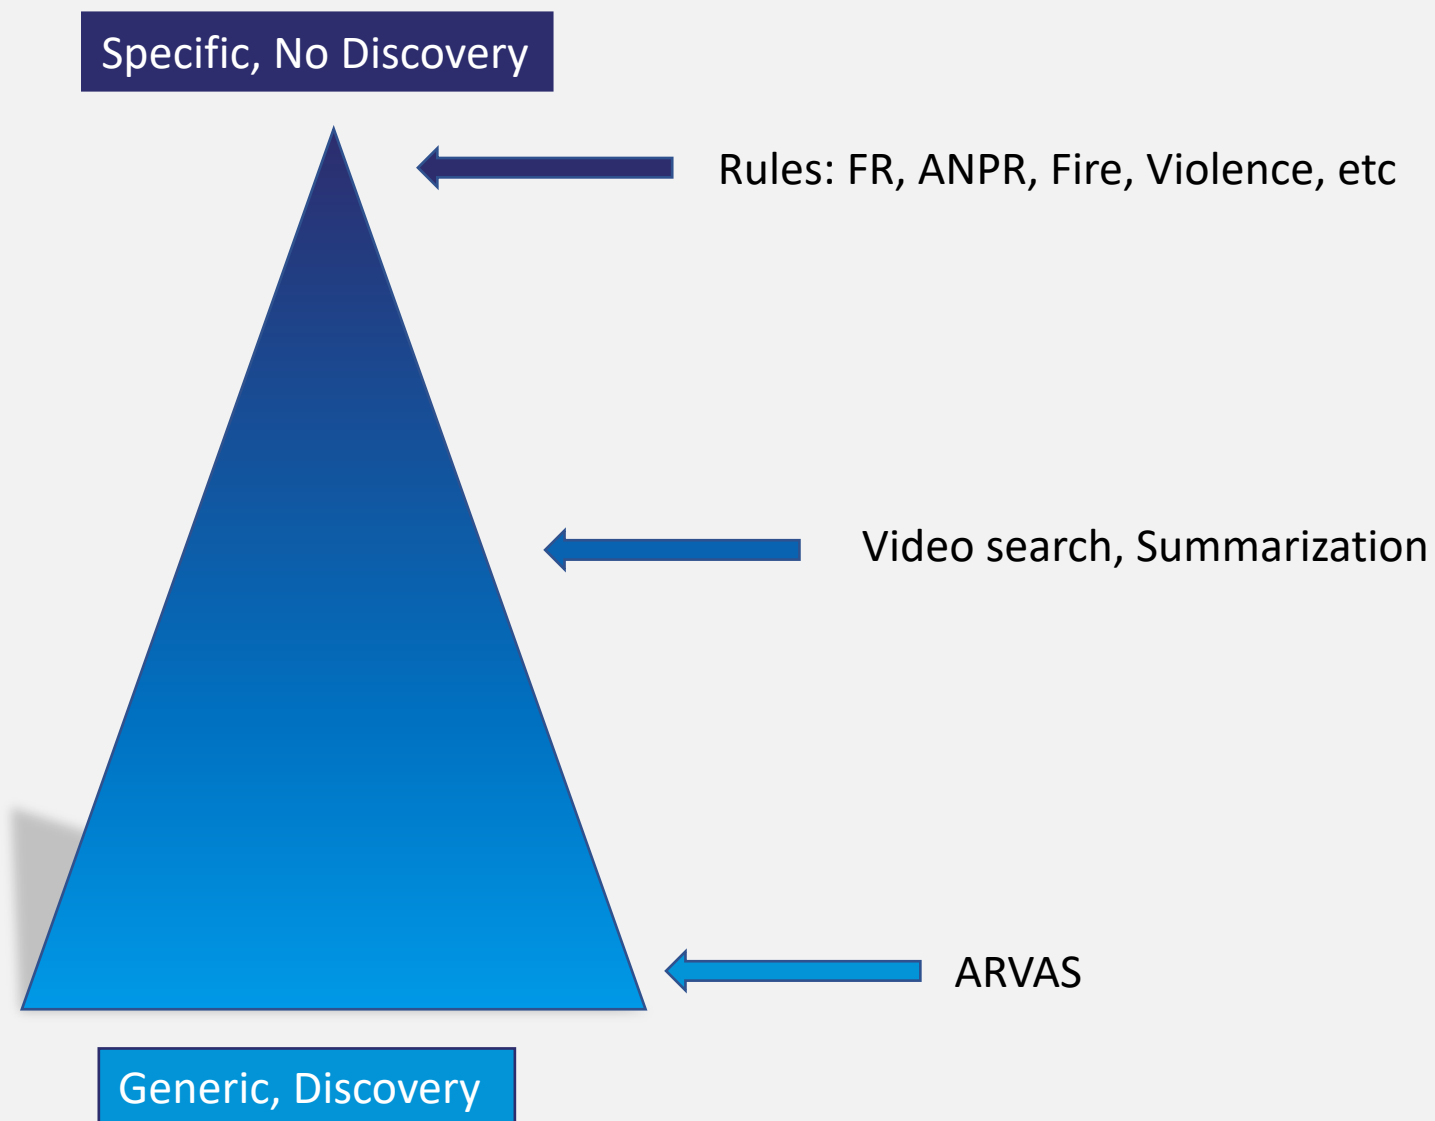

- **High Compatibility**  
Able to accept relatively low rates and resolutions, accommodating older legacy camera sources.
- **Not Scene Dependent**  
Applicable to any camera scene.
- **Highly Scalable**  
Scalable for thousands of cameras. ARVAS can extend your current video surveillance system or be installed from scratch with a VMS.

### Highly Efficient Systems

- **Event Clustering**  
ARVAS' system can cluster similar events together and allow user prioritization.
- **GPU Acceleration**  
Effectively serves a larger number of cameras per server

Effective, proactive monitoring leads to a lower reliance on routine physical patrols, with faster real-time response to anomalous events, preventing incidents from escalating and collecting unknown data.

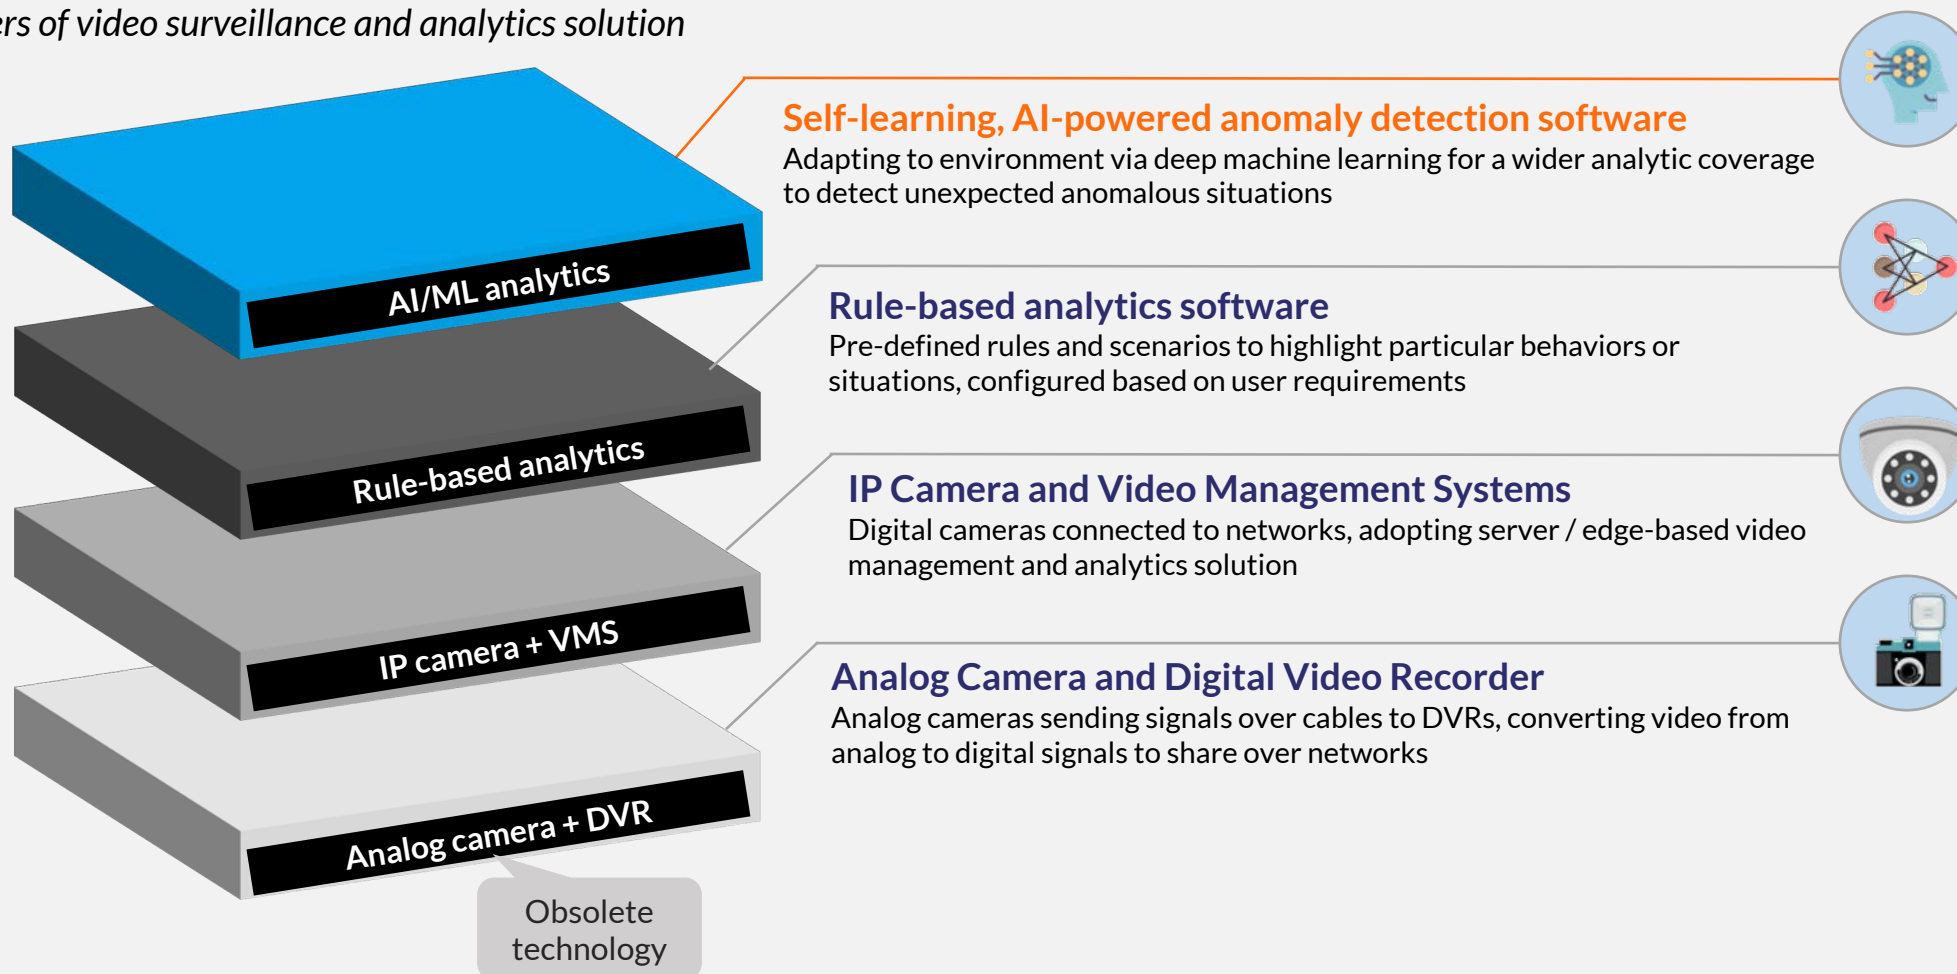

# How ARVAS is positioned to other VA types

# How ARVAS can be Integrated to Surveillance Operation

ARVAS can be applied in conjunction or in replacement of traditional video analytics software to classify objects and detect unexpected scenarios

*Layers of video surveillance and analytics solution*

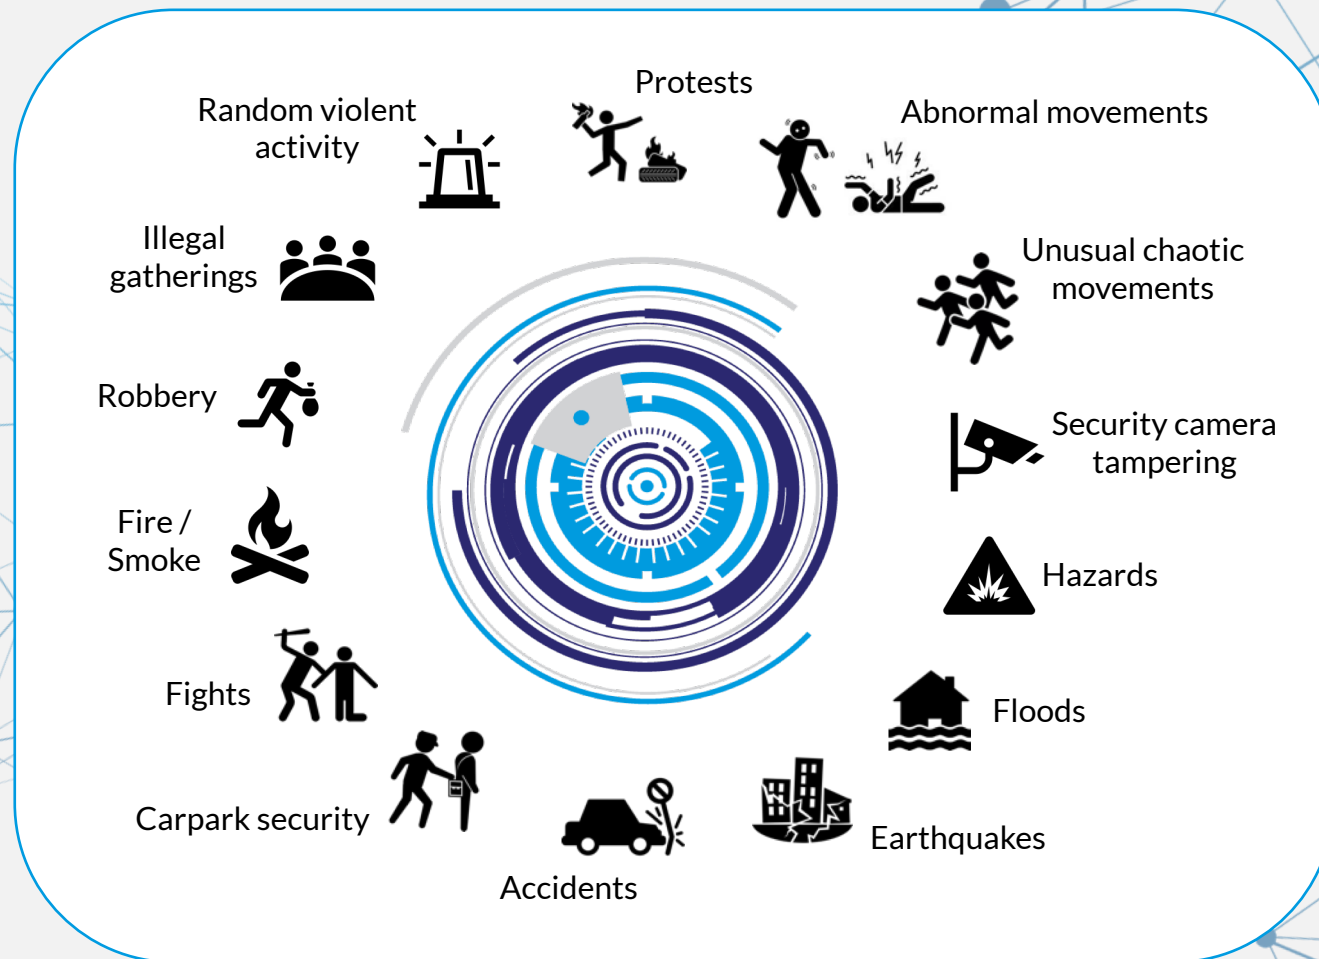

# How ARVAS can upgrade Surveillance Operations

Detect unlimited range of anomalies with ARVAS in place

With self-learning capability, ARVAS can adapt to different environments and detect **unlimited range of anomalies** across all sectors to **improve situational awareness** and to **detect the unknown**.

\* Important: ARVAS is not specifically built to detect these scenarios. These are examples of behavior that is generally abnormal and thus potentially detected by ARVAS based on the scene. ARVAS does not understand or classify the type of event.

# ARVAS can adapt to different environments and detect unlimited range of anomalies

## Potential Safety & Security Applications

**Non-exhaustive**

### Commercial

- ▶ Loss prevention
- ▶ Loitering / Crowd management
- ▶ Camera tampering

### Education

- ▶ Silent hours monitoring
- ▶ Intrusion detection
- ▶ Safety

### Industrial

- ▶ Workforce safety
- ▶ Asset protection
- ▶ Intrusion detection
- ▶ Fire / Smoke

### Critical Infrastructure

- ▶ Violence, burglary and vandalism
- ▶ Intrusion detection
- ▶ Camera tampering

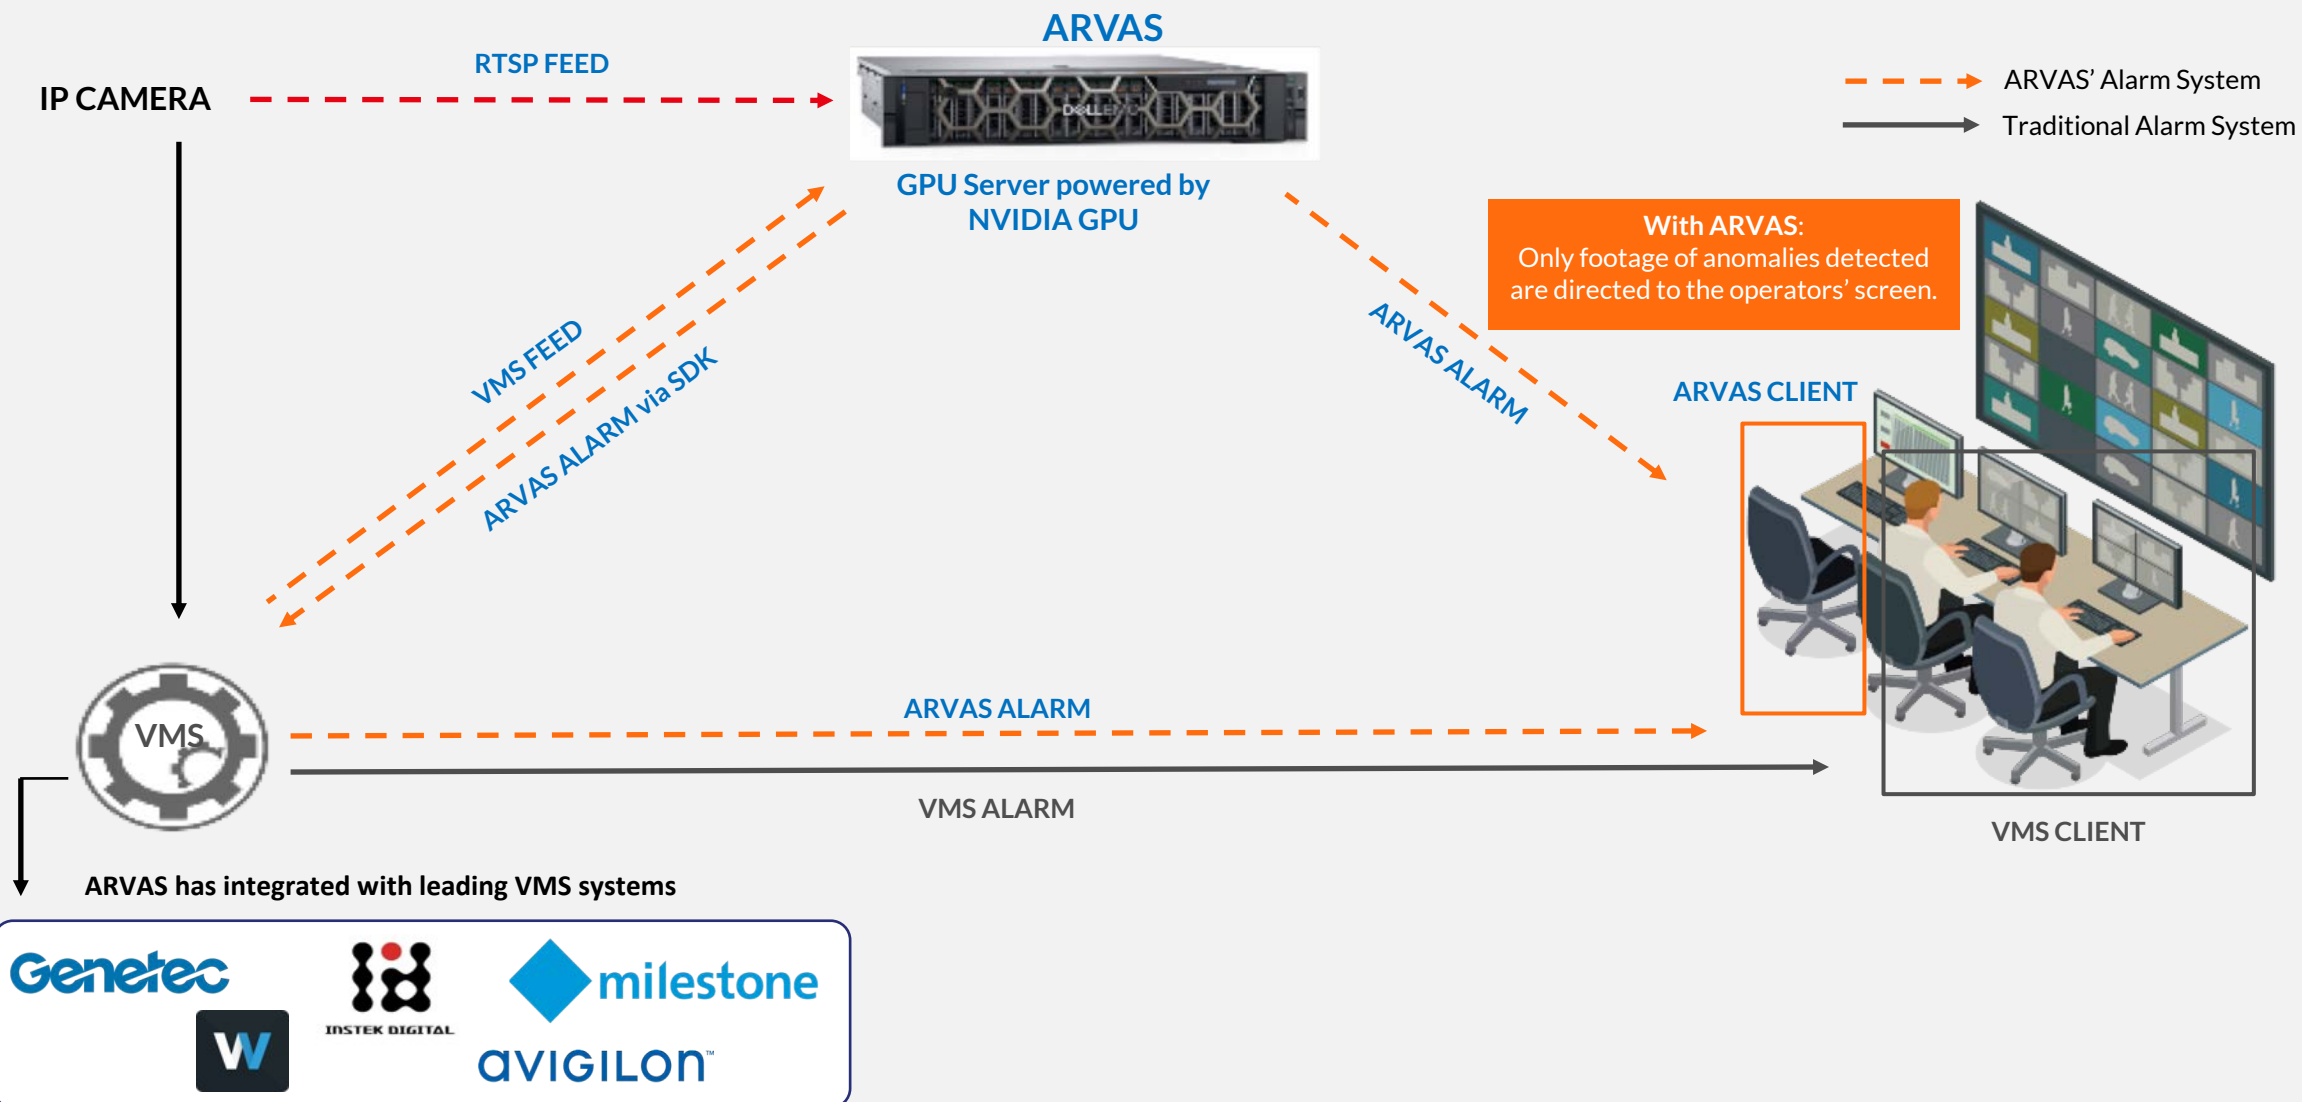

### Banking

- ▶ Camera tampering at ATMs, data centres and branches
- ▶ Burglary

# Overview of Deployment Architecture

# ARVAS Return on Investment

ARVAS can provide you with significant cost savings while improving the overall security standard on premise

## More Efficient Guard Force

With operators that are engaged to identify anomalies and patrols that are event-driven.

## Sustainability + Reduced Utilities Expenses

With more efficient SOC and screens that only turn on for specific events.

## Intangible Security Benefits

With shorter response time, minimal false positives, improved oversight over premises, reduced reputational risks, etc.

# ARVAS – Award Winning Video Analytics

We were acknowledged by PM for effective Public Safety Use and recognized by industry experts

ARVAS was mentioned by Singapore Prime Minister as part of Smart Nation Initiatives during his National Day speech to enhance our public safety while reducing manpower.

“...and we are learning to analyse this combined data, for example, using **artificial intelligence to automatically flag** when something **unusual** is happening. So if I have 10,000 cameras, I don’t need 1,000 people watching those cameras. I just need maybe just 10 people. Each person can watch 1,000 cameras and if the AI detects that something funny is happening, it will pop up and the man can pay attention and a response can be directed.”

## Merlion Awards

Safety & Security Asia

11th Merlion Awards 2018 serve to honour outstanding concepts, new designs and products in the field of security. Underlining the importance of innovation, the Awards give well-deserving companies the accolades of excellence and pride of place to showcase their exemplary solutions and products at the annual Safety & Security Asia exhibition organised by Conference & Exhibition Management Services Pte Ltd (CEMS).

The Awards are divided into four categories: **Surveillance, Access Control, Alarm Systems and Mobility Technology**. Judged by a distinguished panel comprising of industry experts from academia and independent bodies, the Awards are recognition of the highest standards of product innovation excellence in the ASEAN region and beyond.

Straits Times 3 Oct 2018

Only 1 of 2 companies awarded Gold for Surveillance Category in 2018.
